

ECG Clinical Decision Support System

AI-Assisted ECG Diagnostic Report

Patient ID	1	Date	2026-07-16 11:50 IST
Name	hamsika	Doctor	dr anil
Age / Gender	50 / Female	Model	MSCMA-Net v1

Prediction Summary

Class	Probability	Detected
HYP	67.4%	Yes
MI	52.7%	Yes
NORM	40.5%	No
STTC	37.4%	No
CD	22.6%	No

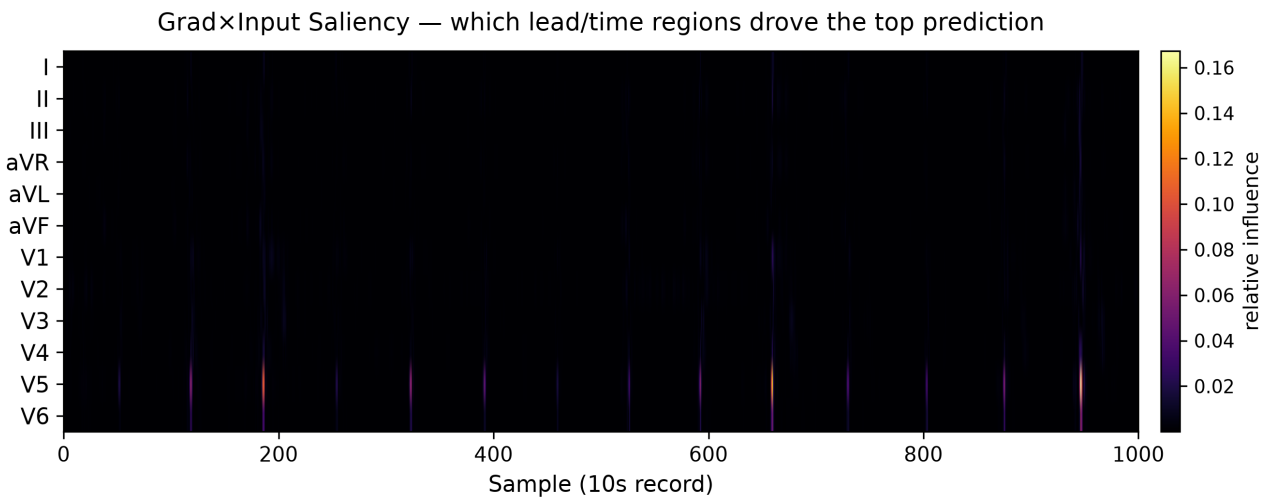

Top Finding: HYP (confidence 67.4%) **Risk Level:** HIGH

Model Interpretation

The model detected patterns most consistent with **HYP** at 67.4% confidence. Highlighted lead regions (see attached ECG viewer) indicate the segments that contributed most strongly to this prediction.

Suggested Action: Immediate cardiology review recommended.

ECG Saliency Heatmap

Highlighted regions indicate ECG segments that contributed most strongly to the model's decision — not a clinical annotation of the exact lesion location.

This output is generated by an AI decision-support tool (MSCMA-Net) and is intended to assist, not replace, clinical judgment. All findings must be reviewed and confirmed by a qualified clinician before any care decision.
